

Performance by genomic region

Inside the region Outside it

480 pipeline runs; the pipeline and high-confidence variants are filtered with the same BED. SomaticSniper calls are not PASS-filtered.

SD: segmental duplications. LM+SD: all low-mappability and segmental duplication regions. Difficult: all difficult regions.
Runs without a call in a region have no precision or F1 there: 4 in segmental duplications, 4 in low mappability and segmental duplications.
